

DEVELOPMENT OVERVIEW

Building the AI Lead Gen Engine

An AI automation engine that finds, scores, and engages VisionWise's accredited-investor market — prototyped in Claude Code, productionized on a managed AI automation server, and driven by a VWC control web app powered by Technijian Chat.AI.

PREPARED FOR

VisionWise Capital, LLC

Sanford D. Coggins, Founder · new build engagement — fixed fee + monthly hosting

WHAT WE'RE BUILDING

From raw market to warm conversation

A repeatable, AI-assisted engine that turns a finite, enumerable universe of investors and partners into qualified, scored, human-approved conversations — routed into VWC's CRM for Sanford and the team to close, and controlled by VWC through a web application.

We **prototype this pipeline in Claude Code first** and review the real results with VWC — proving we pull the *right* investors and the *right* data — **before** we build the production automation server and the control web app. Build the cheap thing, validate, then automate.

Family Offices

CATEGORY 1

Finite universe (FINTRX, OpenCorporates). Hyper-personalized, intro-led outreach.

RIAs

CATEGORY 2

Fully enumerable via SEC IAPD + Apollo. RIA-to-RIA sequences and IC briefings.

Accredited Investors

CATEGORY 3 — BROAD UMBRELLA

HNW owners, high-income professionals, and more — so no slice of the market is missed.

Every contacted investor must be a **verified accredited investor** (Reg D 506(c)). VWC reviews and approves all outreach.

ARCHITECTURE & BUILD PATH

Prototype, productionize, then put VWC in control

We de-risk in Claude Code, validate the data with VWC, build the standing AI automation server, then ship a web application that lets VWC run and adjust the engine themselves — with AI connectivity and token usage delivered through Technijian Chat.AI.

Fed by VWC's data + enrichment sources (VWC owns the subscriptions); AI via Technijian Chat.AI:

CRM, your way: integrate VWC's existing **HubSpot**, or let Technijian host a **customized, VWC-branded SuiteCRM** at crm.visionwisecapital.com and **retire the HubSpot subscription** — open-source, no per-seat fees, tuned to VWC's exact workflow.

WHAT'S COVERED — DEFINE & PROVE

Discovery, then prototype & validate

PHASE

1

Discovery & Strategy

Lock the targets, data sources, success metrics, and the data-quality bar before any build.

- ▶ Strategy brief + confirmed persona definitions across the three categories + channel partners
- ▶ Recommended data sources, tooling, and channel mix
- ▶ Success metrics + the explicit data-quality criteria Phase 2 must hit

PHASE

2

Prototype in Claude Code — validate the data

Build a working prototype of the pipeline directly in Claude Code — pull, enrich, score, and draft against *real* records — with Ravi engaging directly when judgment or review is needed. Then **review the results with VWC** to confirm we are getting the **right investors and the right data** before investing in production.

- ▶ Working Claude Code prototype of the identify → enrich → score → draft flow
- ▶ Sample enriched + scored lead sets, by category, for VWC review
- ▶ Data-quality findings + tuning of sources, filters, and scoring
- ▶ **Go / no-go checkpoint** with VWC before Phases 3–4

Phase 2 is the de-risking step: it proves the data and scoring are right on real records before a dollar goes into the production server and web app. VWC sees actual prospects, not slideware.

WHAT'S COVERED — THE PRODUCTION ENGINE

Phase 3 — the AI automation server

Once VWC signs off on the prototype data, we productionize it as a standing, hosted AI automation server — running continuously with human-in-the-loop approval, with AI delivered through Technijian Chat.AI.

1 • Agent + Agent Harness

REASONING CORE + RUNTIME

The validated logic deployed as an Agent on the Agent Harness — hosted, scheduled, stateful, observable — so it runs without a human babysitting it.

2 • Skills

REUSABLE CAPABILITIES

Identify, enrich, score, and draft packaged as discrete Skills — versioned and testable, each improvable independently.

3 • N8N workflow automation

ORCHESTRATION + APPROVALS

Runs the end-to-end pipeline on a schedule and routes records through the human-in-the-loop approval gate before anything sends.

4 • Technijian Chat.AI

AI CONNECTIVITY + TOKENS

All model calls route through Technijian Chat.AI for AI connectivity and metered token usage — one governed, observable AI layer.

5 • CRM + deliverability

HUBSPOT OR SUITECRM

Connect VWC's existing **HubSpot**, or have Technijian host, customize & brand **SuiteCRM** (crm.visionwisecapital.com); scored leads land with source/score/rationale and disposition flows back. Dedicated domain (SPF/DKIM/DMARC), warm-up, suppression, CAN-SPAM opt-out.

6 • Monitoring

HEALTH + KPIS

Server health monitoring/alerting plus the KPI data that powers the web-app dashboard (Phase 4).

Hosted and operated by Technijian on an ongoing basis (see Commercials), documented for full transparency, and built to hand off.

WHAT'S COVERED — VWC IN CONTROL

Phase 4 — the VWC control web application

A web application that puts VWC in the driver's seat — review and approve outreach, manage targets and sources, tune scoring and sequences, watch the dashboard, and manage AI usage. It interfaces **Technijian Chat.AI** for AI connectivity and token usage. Built so VWC can make changes without waiting on engineering.

Review & Approve

HUMAN-IN-THE-LOOP

The approval queue in the browser — edit, approve, or reject every drafted message before it sends.

Targets & Sources

SELF-SERVICE

Turn audiences/segments on or off, adjust filters, and import lists — no code, no ticket.

Scoring & Sequences

TUNABLE

Adjust scoring thresholds and outreach copy/cadence directly, with changes versioned.

Dashboard & Reporting

VISIBILITY

Live KPIs — pipeline velocity, reply rate, meetings booked, conversion — with drill-down.

Technijian Chat.AI

AI + TOKEN USAGE

AI connectivity through Technijian Chat.AI: model selection, live token-usage visibility, and usage caps.

Roles & Audit

GOVERNANCE

VWC team logins, role-based permissions, and a full audit log of approvals and changes.

The web app is the control surface over the Phase 3 automation server — the engine runs underneath; VWC steers it from the browser.

WHAT'S COVERED — PROVE & TRANSFER

Pilot, go-live & ongoing operation

PHASE
5

Pilot, Tuning & Go-Live

Run a controlled pilot against a small VWC-approved list (driven from the web app), tune on real results, then authorize broader rollout.

- ▶ Pilot results — deliverability, reply rate, meetings booked, false-positive rate
- ▶ Tuned scoring thresholds + rewritten underperforming templates
- ▶ Go-live checklist + rollout plan + approval workflow + budget guardrails

PHASE
6

Knowledge Transfer & Ongoing Operation

Document the system, train VWC's operators on the web app, and transition into managed hosting & operations.

- ▶ Operator runbook (review queue, approvals, scoring, suppressions, troubleshooting)
- ▶ Architecture reference (components, Chat.AI, vendor contracts, key vaulting, recovery)
- ▶ Recorded training session(s) + transition to ongoing hosting & support

After go-live, the server + web app are kept running, monitored, and improved under the monthly hosting & operations engagement (next page). VWC can take operations fully in-house at any time — everything is documented and built to hand off.

TIMELINE & COMMERCIALS

Fixed fee to build, monthly to host

A new, fixed-fee build engagement — billed by milestone, not by the hour — followed by a monthly hosting & operations fee that keeps the server and web app running and improving.

ONE-TIME — BUILD

Fixed project fee

Phases 1–6, billed by milestone (below). Fixed — Technijian absorbs effort variance within the agreed scope. Amount set in the SOW.

ONGOING — MONTHLY

Hosting & operations

Runs, monitors, maintains & improves the server, web app, and (if chosen) the hosted SuiteCRM. Monthly fee set in the SOW. AI/token usage via Technijian Chat.AI and data subscriptions are usage-based, billed to VWC.

PHASE	COVERS	TIMELINE	MILESTONE BILLING
1 • Discovery & Strategy	Targets, sources, success + data-quality criteria	Wks 1–2	On signing
2 • Prototype in Claude Code	Build + validate data with VWC (go/no-go)	Wks 2–4	On prototype sign-off
3 • AI Automation Server	Agent, Harness, Skills, N8N, Chat.AI, CRM (HubSpot or SuiteCRM)	Wks 4–8	On server delivery
4 • Web Application	VWC control panel + Technijian Chat.AI interface	Wks 7–11	On web-app delivery
5 • Pilot, Tuning & Go-Live	Controlled pilot → tune → rollout	Wks 11–13	On go-live
6 • Knowledge Transfer & Ops	Runbook, training, transition to hosting	Wks 13–14	On acceptance → monthly begins

Usage-based (billed to VWC)

AI connectivity & token usage via **Technijian Chat.AI**; data/enrichment subscriptions (Apollo, Hunter, ATTOM, BatchData, FINTRX) and sending infrastructure. **CRM**: keep HubSpot (its subscription), or switch to Technijian-hosted **SuiteCRM** — open-source, **no per-seat fees**, hosting folds into the monthly.

What VWC provides

One empowered decision-maker (Sanford), CRM/vendor access, sample data, the Phase 2 data review + go/no-go, and approval of outreach via the web app.

New engagement — supersedes the prior advisory SOW. Dollar amounts (fixed build fee, monthly hosting) are set in the accompanying fixed-fee SOW.

GUARDRAILS

Built compliant by design

HOW THE ENGINE RESPECTS VWC'S REGULATORY REALITY

- ✓ VWC is a **private real estate sponsor** — not a registered investment adviser or broker-dealer. The system never performs licensed activity.
- ✓ Offerings are **Reg D Rule 506(c)**: general solicitation is permitted, so outreach is allowed — but every investor's **accredited status must be verified** before any offering action.
- ✓ **Accredited investors only** — targeting and gating are designed around that constraint end-to-end.
- ✓ **Human-in-the-loop** — VWC reviews and approves every message in the web app before it sends; nothing goes out at scale unattended.
- ✓ Anti-fraud discipline (no misleading or unsubstantiated performance claims), CAN-SPAM opt-out, TCPA, and state blue-sky notices respected.
- ✓ Investor NPI is governed by **NDA-VWC-001**. VWC owns legal/compliance and engages securities counsel; Technijian flags considerations but does not give legal advice.

To start the build

- 1 **Approve this scope & sign the fixed-fee build SOW** (build fee + monthly hosting; supersedes the prior advisory SOW).
- 2 **Confirm the empowered point of contact** for scope, spend, and outreach approval.
- 3 **Line up usage budget** (Technijian Chat.AI tokens, data, CRM) — finalized with you in Phase 1.
- 4 **Name securities counsel** for outreach-content review and the 506(c) verification approach.

Ready to build when you are.

New fixed-fee build engagement · monthly hosting & operations.
